Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. US20020160018A1
GENERAL INFORMATION:
APPLICANT: AUGORET et al.
TITLE OF INVENTION: POLYNICLEOTIDE VACCINE FORMULA, PARTICULARLY FOR TITLE OF INVENTION: TREATING BOVINE RESPIRATORY DISEASE
FILE REFERENCE: 454313-2250
FULE REPERENCE: 454313-2250
CURRENT APPLICATION NUMBER: US/10/085,519
CURRENT EILING DATE: 2020-02-28
PRIOR APPLICATION NUMBER: 09/232,279
PRIOR FILING DATE: 1999-01-15
NUMBER: FILING DATE: 1999-01-15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NUMBER OF SEQ ID NOS: 19

```
CC producing a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector CC comprising a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector CC creyion for the protein to produce a recombinant host cell and culturing CC The nucleic acid encoding the chelon protein is useful for binding CC divalent mercuric ions, to take up, sequester and concentrate the heavy metal ions from contaminated soil, ground water, hydroponic solutions or CC irrigation water of waste streams. The DNA of the invention, when CC inmobilised onto a solid support, is useful for concentrating heavy metal CC ions from contaminated environment waste streams or contaminated CC aqueous medium including biological fluids. The nucleic acid, when cc recombinantly expressed in enteric bacteria (which are nontoxigenic and CC elimination of mercuric ion from gastrointestinal tracts of animals or CC elimination of mercuric ion from gastrointestinal tracts of animals or CC elimination of the invention are also useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent cation such as mercury or cadmium with high affinity. The present amino CC invention. This sequence is one of the heavy metal binding proteins of termed chelons of the invention.

CC invention of the invention acids 1-107 of this protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cc which binds mercuric ions. The invention is useful for recombinant of expressing a chelon coding sequence with a vector cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding cregion for the protein to produce a recombinant host cell and culturing client recombinant host cell under conditions, where DNA is expressed.

CC The nucleic acid encoding the chelon protein is useful for binding coding creditions from contaminated soil, ground water, hydroponic solutions or irrigation water of waste streams. The DNA of the invention, when criminated environment waste streams or concentrate the heavy metal ions from contaminated environment waste streams or concentrating heavy metal consistency is suitable for useful for concentration and cell-indicated environment waste streams or contaminated environment environment waste streams or contaminated environment environment with high affinity. The present amino cell-indicated environment environment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               QΥ

CC The nucleic acid encoding the chelon protein is useful for binding

CC divalent mercuric ions, to take up, sequester and concentrate the heavy

CC metal ions from contaminated soil, ground water, hydroponic solutions or

CC immobilised onto a solid support, is useful for concentrating heavy metal

CC ions from contaminated environment waste streams or contaminated

CC aqueous medium including biological fluids. The nucleic acid, when

CC recombinantly expressed in enteric bacteria (which are nontoxigenic and

CC recombinantly expressed in enteric bacteria (which are nontoxigenic and

CC nonpathogenic), is sultable for use in the in vivo sequestration and

CC elimination of mercuric ion from gastrointestinal tracts of animals or

CC humans exposed to toxic metal ions such as mercury and/or cadmium. The

CC molecules of the invention are also useful in water treatment resins.

CC The nucleic acid of the invention is highly specific and binds divalent

CC cation such as mercury or cadmium with high affinity. The present amino

CC acid sequence represents one of a collection (AAU97550-AAU97560) of

CC This sequence is one of the heavy metal binding proteins of the invention.

                                                                                                                  Best
                                                                                                                                     Query Match
                                                                                                                                                                                                                                                              ions from contaminated environment waste streams or contaminated aqueous medium including biological fluids. The nucleic acid, when recombinantly expressed in enteric bacteria (which are nontoxigenic and nonpathogenic), is suitable for use in the in vivo sequestration and elimination of mercuric ion from gastrointestinal tracts of animals or humans exposed to toxic metal ions such as mercury and/or cadmium. The molecules of the invention are also useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent cation such as mercury or cadmium with high affinity. The present amino acid sequence represents one of a collection (AAU97553-AAU97560) of synthetic cadmium/mercury ion binding chelon proteins of the invention which is the invention of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding region for the protein to produce a recombinant host cell and culturing the recombinant host cell under conditions, where DNA is expressed. The nucleic acid encoding the chelon protein is useful for binding divalent mercuric ions, to take up, sequester and concentrate the heavy metal ions from contaminated soil, ground water, hydroponic solutions or irrigation water of waste streams. The DNA of the invention, when immobilised onto a soild support, is useful for concentrating heavy metal inmobilised onto a soild support, is useful for concentrating heavy metal
                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel non-naturally occurring recombinant DNA molecule encoding a chelon protein useful for binding divalent cation mercury from contaminated soil, water, aqueous medium including biological fluids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          irrigation water; waste stream; contaminated aqueous medium; biological fluid; gastrointestinal tract; chelon protein; enteric bacteria; toxic metal ion; mercury; cadmium; divalent cation; heavy metal binding protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    producing a protein in a host-cell, by infecting or transforming a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       recombinant DNA molecule comprising a sequence encoding a chelon protein which binds mercuric ions. The invention is useful for recombinantly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a new non-naturally occurring

                                                                                                                                                                                                                                                           CC which binds mercuric ions. The invention is useful for recombinantly comprising a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding region for the protein to produce a recombinant host cell under conditions, where DNA is expressed. CC The nucleic acid encoding the chelon protein is useful for binding contaminated soil, ground water and concentrate the heavy metal ions from contaminated soil, ground water, hydroponic solutions or cirrigation water of waste streams. The DNA of the invention, when commobilised onto a solid support, is useful for concentrating heavy metal constrained environment waste streams or contaminated concentrating heavy metal conspathogenic), is suitable for use in the in vivo sequestration and conpathogenic), is suitable for use in the in vivo sequestration and compathogenic), is suitable for use in the in vivo sequestration and concentration of mercuric ion from gastrointestinal tracts of animals or humans exposed to toxic metal ions such as mercury and/or cadmium. The nucleic acid of the invention are also useful in water treatment resins. CC the nucleic acid of the invention is highly specific and binds divalent cation such as mercury or cadmium with high affinity. The present amino can be invented as one of the heavy metal binding proteins termed chelons of the invention.
                                                                                                                                              Query Match

                                                                                                                                                          Comprising a protein in a host-cell, by infecting or recombinant DNA molecule comprising a sequence encoding a chelon protein

CC which binds mercuric ions. The invention is useful for recombinantly

CC producing a protein in a host-cell, by infecting or transforming a host

CC producing a protein in a host-cell, by infecting or transforming a host

CC cell capable of expressing a chelon coding sequence with a vector

CC comprising a promoter active in the host cell operably linked to a coding

CC region for the protein to produce a recombinant host cell and culturing

CC region for the protein to produce a recombinant host cell and culturing

CC the recombinant host cell under conditions, where DNA is expressed.

CC The nucleic acid encoding the chelon protein is useful for binding

CC divalent mercuric ions, to take up, sequester and concentrate the heavy

CC metal ions from contaminated soil, ground water, hydroponic solutions or

CC immobilised onto a solid support, is useful for concentrating heavy metal

CC ions from contaminated environment waste streams or contaminated

CC aqueous medium including biological fluids. The nucleic acid, when

CC compathogenic), is suitable for use in the in vivo sequestration and

CC nonpathogenic), is suitable for use in the in vivo sequestration and

CC compathogenic), is suitable for use in the in vivo sequestration and

CC nonpathogenic), is suitable for use in the in vivo sequestration and

CC molecules of the invention are also useful in water treatment resins.

CC The nucleic acid of the invention is highly specific and binds divalent

CC acido sequence represents one of a collection (AAU97553-AAU97560) of

CC synthetic cadmium/mercury ion binding chelon proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    irrigation water; waste stream; contaminated aqueous medium; biological fluid; gastrointestinal tract; chelon protein; enteric bacteria; toxic metal ion; mercury; cadmium; divalen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Synthetic cadmium/mercury ion binding chelon protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAU97558;

Which binds mercuric ions. The invention is useful for recombinantly cell capable of expressing a chelon coding sequence with a vector cell capable of expressing a chelon coding sequence with a vector cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding certain for the protein to produce a recombinant host cell and culturing the recombinant host cell under conditions, where DNA is expressed. Consider the recombinant host cell under conditions, where DNA is expressed in the recombinant mercuric ions, to take up, sequester and concentrate the heavy metal ions from contaminated soil, ground water, hydroponic solutions or irrigation water of waste streams. The DNA of the invention, when cell capable of the invention is useful for concentrating heavy metal constitution of mercuric ion from gastrointestinal tracts of animals or contaminated environment waste streams or contaminated cell mination of mercuric ion from gastrointestinal tracts of animals or contamination of mercuric ion from gastrointestinal tracts of animals or contamination of mercuric ion from gastrointestinal tracts of animals or contamination of mercuric ion from gastrointestinal tracts of animals or contamination of mercuric ion from gastrointestinal tracts of animals or concentration and cell action such as mercury and/or cadmium. The concentration are also useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent cation such as mercury or cadmium with high affinity. The present amino contamination of the heavy metal binding proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 4; Page 22; 42pp; English.

CC producing a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector CC comprising a promoter active in the host cell operably linked to a coding CC region for the protein to produce a recombinant host cell and culturing CC the recombinant host cell under conditions, where DNA is expressed. CC The nucleic acid encoding the chelon protein is useful for binding CC divalent mercuric ions, to take up, sequester and concentrate the heavy CC metal ions from contaminated soil, ground water, hydroponic solutions or CC irrigation water of waste streams. The DNA of the invention, when CC inmobilised onto a solid support, is useful for concentrating heavy metal conservation and the component waste streams or contaminated contaminated environment waste streams or contaminated contaminated in enteric bacteria (which are nontoxigenic and conspathogenic), is suitable for use in the in vivo sequestration and conspathogenic), is suitable for use in the in vivo sequestration and conspathogenic), is suitable for use in the in vivo sequestration and conspathogenic).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAU97555
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δÃ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         humans exposed to toxic metal ions such as mercury and/or cadmium. The molecules of the invention are also useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent cation such as mercury or cadmium with high affinity. The present amino acid sequence represents one of a collection (AA097553-AA097560) of synthetic cadmium/mercury ion binding chelon proteins of the invention. This sequence is one of the heavy metal binding proteins termed chelons
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of the invention.
producing a protein in a host-cell, by infecting or transforming a host cell capable of expressing a chelon coding sequence with a vector comprising a promoter active in the host cell operably linked to a coding region for the protein to produce a recombinant host cell and culturing the recombinant host cell under conditions, where DNA is expressed. The nucleic acid encoding the chelon protein is useful for binding divalent mercuric ions, to take up, sequester and concentrate the heavy metal ions from contaminated soil, ground water, hydroponic solutions or
                                                                                                                                                                        The present invention relates to a new non-naturally occurring recombinant DNA molecule comprising a sequence encoding a chelon protein which binds mercuric ions. The invention is useful for recombinantly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   irrigation water; waste stream; contaminated aqueous medium; biological fluid; gastrointestinal tract; chelon protein; enteric bacteria; toxic metal ion; mercury; cadmium; divalent cation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Synthetic cadmium/mercury ion binding chelon protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ions from contaminated environment waste streams or contaminated aqueous medium including biological fluids. The nucleic acid, when recombinantly expressed in enteric bacteria (which are nontoxigenic and nonpathogenic), is suitable for use in the in vivo sequestration and elimination of mercuric ion from gastrointestinal tracts of animals or humans exposed to toxic metal ions such as mercury and/or cadmium. The molecules of the invention are also useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent cation such as mercury or cadmium with high affinity. The present amino acid sequence represents one of a collection (AAU97563) of synthetic cadmium/mercury ion binding chelon proteins of the invention. This sequence is one of the heavy metal binding proteins termed chelons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        irrigation water of waste streams. The DNA of the invention, when immobilised onto a solid support, is useful for concentrating heavy metal

Novel non-naturally occurring recombinant DNA molecule encoding a chelon protein useful for binding divalent cation mercury from the chelon protein useful for binding divalent cation mercury from the chelon protein useful for binding divalent cation mercury from the chelon protein useful for binding divalent cation mercury from the chelon protein useful for binding divalent cation mercury from the chelon protein useful for binding divalent cation mercury from the chelon protein useful for binding divalent cation mercury from the chelon protein useful for binding divalent cation mercury from the chelon protein useful for binding divalent cation mercury from the chelon protein useful for binding divalent cation mercury from the chelon protein useful for binding divalent cation mercury from the chelon protein useful for binding divalent cation mercury from the chelon protein useful for binding divalent cation mercury from the chelon protein useful for binding divalent cation mercury from the chelon protein useful for binding divalent cation mercury from the chelon protein useful for binding divalent cation mercury from the chelon protein useful for binding divalent cation mercury from the chelon protein useful for binding divalent cation mercury from the chelon protein the chelon protein

contaminated soil, water, aqueous medium including biological fluids

N-PSDB;

ABK52206

The present invention relates to a new non-naturally occurring

 ${\tt DNA}$  molecule comprising a sequence encoding a chelon protein mercuric ions. The invention is useful for recombinantly

The DNA of the invention, when immobilised onto a solid support, is useful for concentrating heavy metal ions from contaminated environment waste streams or contaminated aqueous medium including biological fluids. The nucleic acid, when recombinantly expressed in enteric bacteria (which are nontoxigenic and nonpathogenic), is suitable for use in the in vivo sequestration and elimination of mercuric ion from gastrointestinal tracts of animals or humans exposed to toxic metal ions such as mercury and/or cadmium. The molecules of the invention are also useful in water treatment resins. The nucleic acid of the invention is highly specific and binds divalent cation such as mercury or cadmium with high affinity. The present amino are in the stream of the present amino are the stream of the stream of the present amino are the stream of the stream of the present amino are the stream of the stream of the present amino are the stream of the stream
